

Griplock “Pushmepullyu” System

Griplock's ZF-15ZZ double gripper has two independent gripping mechanisms so the fixture weight load is divided between them. This allows for extraordinary holding power from 1/16" galv. cable.

NOTE: Mechanism weight-load rating is always divisible by 5 in compliance with industry standards. 80lbs max. static load when mounted as shown in a double-loop configuration using our medium-to-high tensile strength cable.
